

Assignment on Operating System

Introduction

An Operating System (OS) is system software that manages computer hardware and software resources and acts as an interface between the user and the computer hardware.

Functions of an Operating System

Process Management, Memory Management, File Management, Device Management, Security, and User Interface Management.

Types of Operating Systems

Batch OS, Time-Sharing OS, Distributed OS, Real-Time OS, Network OS, and Mobile OS.

Components

Kernel, Shell, File System, Device Drivers, and System Utilities are the major components of an operating system.

Advantages

Efficient resource utilization, multitasking support, improved security, and ease of use.

Examples

Windows, Linux, macOS, Android, and iOS are widely used operating systems.

Conclusion

Operating systems are essential for the smooth functioning of computers and mobile devices, providing a platform for application execution and resource management.
